MT82W
Scan Engine
User's Manual

Version 1.0   DATE: 2023/06/08

Table of Content

Chapter 1 System Setting

Introduction

The MT82W can be configured by scanning programming barcodes. All user

programmable features/options are described along with their programming

barcodes/commands in the following sections. This programming method is most

straightforward. However, it requires manually scanning barcodes. As a result, errors are

more likely to occur.

Programming Barcode

The figure above is an example that shows you the programming barcode for the Enter Setup

function:

1. The programming barcode.

2. The description of feature/function.

Use of Programming Code

Scanning the **Enter Setup** barcode can enable the engine to enter the setup mode.

Then you can scan a number of

programming barcodes to configure your engine. To exit the setup mode, scan the

Exit Setup barcode or a non-programing barcode, or reboot the engine

||| |||| ||| |||||| |||| ||||| ||| |||||

Enter Setup (default)

||| ||| ||||| |||| ||||| |||| ||||| |||

Exit Setup

Restore Factory Default

Restore Factory Default

User Preference

User can set up his/her preference of the scanner.

Save User Preference

Restore to User Preference Default

Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time.

This feature is only applicable to the Sense and Continuous modes.

It's programmable as 500ms, 750ms, 1s and 2s. 500ms is the default value.

500ms (default)

750ms

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖

1s

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖

2s

Beeper

The scanner issues different beeps to indicate status: Good-Read Beep, Error Beep, Startup

Beep and Programming Beep.

Beeper Volume

For setting up **Good Read Beep** and **Error Beep** only.

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖

High Volume (default)

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖

Low Volume

Startup Beep

The engine can be programmed to beep when it is powered on. Scan the **Off**

barcode if you do not want a power on beep.
On (default)

LED Illumination

Normal（default）： LED on engine are turned on during image capture；

Always on： Illumination LED on the engine keep on after the engine is powered on.

Always off： Illumination LED on the engine are off all the time

Normal（default）

Always on

Always off

Aimer

Normal (default) : The engine projects an aiming pattern only during barcode

scanning/capture.

Always On: Aiming pattern is constantly on after the engine is powered on.

Off: Aiming pattern is off all the time.

Normal (default)

Always on

Always off

Good Read LED

The LED can be programmed to be On or Off to indicate good read.

On (default)

Off

Firmware Upgrade

Please connect the scanner with a USB cable for firmware upgrade.

Firmware Upgrade

Steps to upgrade firmware：

1.Plug the scanner with a USB cable；

2. Scan **Firmware Upgrade** barcode to enter USB driver mode and wait for USB driver showing up on the computer;

3.Copy the firmware file into the USB driver;

4. Eject the USB driver and replug the usb cable to restart up the scanner and the scanner will start the firmware upgrade procedure.

5.The scanner beeps after firmware upgrading.

If the upgrade is successful, the factory settings will be restored, and users can reset the scanner according to their needs.

If the upgrade fails, you need to re-power on and restart the scanner and perform the above upgrade steps again.

Auto Sleep Mode

Enable/Disable Auto Sleep Mode

The auto sleep mode can be set up only when the scanner is under Level Mode. Auto Sleep allows the engine to automatically enter the sleep mode if no operation or communication is performed for a time period (user programmable). Sending trigger signal can awake the engine. The default setting is 5s.

When the scanner is under USB-keyboard interface and awake from auto sleep mode, it will not transmit any decoded data until it's re powered on.

Disable (default)

Enable

Enter Sleep Mode

Enter Sleep Mode Now

Set Time Period from Idle to Sleep

The following parameter sets how long the engine remains idle (no operation or communication occurs) before it is put into sleep mode. It is programmable in 1s increments from 1s to 3600s.

Time Period from Idle to Sleep

Set Time Period from Idle to Sleep to '10s'(default： 5s)

1. Scan **Time Period from Idle to Sleep** barcode.

2. Scan numeric barcode"1""0"from the "Digital barcodes" section in Appendix 1.

3. Scan **Save** barcode in Appendix 1

Chapter 2 Scan Mode

Sense Mode (default)

Sense Mode

The engine activates a decode session every time it detects a barcode presented to it.

The decode session continues until a barcode is decoded or the decode session

timeout expires. **Reread Timeout** can avoid undesired rereading of same barcode in a

given period of time.

Sense Mode

Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan

attempt. It is programmable from 3s to 10s. The default setting is 3s.

Short (default)

Medium

Long

Custom Decode Session Timeout

Set custom decode session timeout

It's programmable in 0.1s increments from 1 to 999. The default setting is 3s.

Set Custom Decode Session Timeout

Set the decode session timeout to 10s:

1, Scan **Set Custom Decode Session Timeout** Barcode

2, Scan the numeric barcodes："1""0" from the "Digital barcodes"

section in Appendix1.

3, Scan the **Save** barocde in Appendix1

Good Read Illumination LED Duration

This parameter sets the amount of time that the Good Read LED to remain on following a

good read.

It's programmable as Short, Medium and Long, corresponding to 3s, 7s and 10s. The

default setting is 0s.

Short

Medium
Long
Set up Custom Duration

Set Custom Good Read Illumination LED Duration

This parameter sets the amount of custom time that the Good Read LED to remain on

following a good read. It is programmable in 0.1s increments from 1 to 999.

Set Custom Good Read Illumination LED Duration

Set the custom duration as 10s:

1, Scan **Set Custom Good Read LED Duration** Barcode.

2, Scan numeric barcode"1""0" from the "Digital Barcodes" section in

Appendix1

3, Scan **Save** barcode in Appendix 1

Level Mode

A trigger pull activates a decode session. The decode session continues until a barcode is

decoded or you release the trigger

Level Mode

Continuous Mode

The engine automatically starts one decode session after another. To suspend/resume

barcode reading, simply press the trigger. **Reread Timeout** can avoid undesired rereading

of same barcode in a given period of time.

Continuous Mode

Chapter 3 Communication Interface

USB Interface

USB HID　(default)

When the engine is connected to the USB port on a host device, you can enable the USB

HID Keyboard feature by scanning the barcode below. Then engine's transmission will be

simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It

works on a Plug and Play basis and no driver is required.

USB HID

USB HID Data Upload Method

Before turning on this function, make sure that "USB HID Mode" is turned on.

PC Software

USB-Keyboard　(default)

||||||||||||||||||||||||||||

Both PC Software and USB-Keyboard

Function Key Mapping

This setting is aimed for USB-Keyboard Mode. Please Refer to Appendix《ASCII Table》.

Virtual Keyboard

Virtual keyboard Enable (mode one): The characters between 0x20 ~ 0xFF are output using the virtual keyboard which is not supported under the current keyboard layout, and the characters between 0x00 ~ 0x1F are output according to the definition of control characters.

Virtual keyboard Enable (mode two): All characters between 0x20 and 0xFF are output using virtual keyboard, and characters between 0x00 and 0x1F are output according to the definition of control characters.

Virtual keyboard Enable (mode three): All characters used between 0x00 and 0xFF are output using virtual keyboard.

||| ||| |||| ||| || |||| |||||| || |||
Disable Virtual Keyboard (default)

Enable Virtual Keyboard （Mode 1）

Enable Virtual Keyboard （Mode 2）

Enable Virtual Keyboard （Mode 3）

USB-Keyboard Transmit Speed

Low Speed

Medium Speed

High Speed （default）

Set Custom Speed

Set Custom Transmission Speed

The transmission speed can be set up from 2ms to 50ms.

||||||||||||||||||||||||

Set Custom Transmission Speed (default10ms)

Set custom transmission speed to 10ms:

1. Scan **Set Custom Transmission Speed** barcode.

2. Scan numeric barcode"1""0" from the "Digital Barcodes" section in appendix 1.

3. Scan **Save** barcode in appendix 1.

Carriage Return and Line Feed

Only 0A wraps: 0D does not output, 0A outputs Line Feed (for barcode data only, it does not affect the prefix and suffix).

Only 0D line feed (default): 0A does not output, 0D output Enter (for barcode data only, does not affect the prefix and suffix).

0A and 0D both wrap: 0D and 0A both output Enter (for barcode data only, it does not affect the prefix and suffix).

||||||||||||||||||||||||

Only 0A wraps

||||||||||||||||||||||||

Only 0D line feed (default)

‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖‖

USB CDC

TTL- 232 Interface

Serial communication interface is usually used when connecting the engine to a host device (like PC, POS). However, to ensure smooth communication and accuracy of data, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device

Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the host requirements. Default is 9600bps.

Parity Check

Set the parity type to match the host requirements.

Odd Parity: If the data contains an odd number of 1 bits, the parity bit value is set to 0.

Even Parity: If the data contains an even number of 1 bits, the parity bit value is set to 0.

None: Select this option when no parity bit is required.

Stop Bit: The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Set the number of stop bits to match the host requirements.

Data Bit8, Stop Bit1, No Parity (default)

Data Bit8, Stop Bit1, Odd Parity

Data Bit8, Stop Bit1, Even Parity

Data Bit8, Stop Bit2, No Parity

Data Bit8, Stop Bit2, Odd Parity

Data Bit8, Stop Bit2, Even Parity

Chapter 4 Data Format

Custom Prefix

Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 10 characters. For example, if the custom prefix is "AB" and the barcode data is "123", the Host will receive "AB123".

Enable Custom Prefix

Disable Custom Prefix (default)

Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode then the numeric barcodes

corresponding to the hexadecimal value of a desired prefix then the **Save** barcode.

Set custom prefix "a" (Hex value is 0x61) to all symbologies(CODE ID

value is 0x99)

1.. Scan **Set Custom Prefix** barcode.

2.. Scan numeric barcode"9""9""6""1" from the "Digital Barcodes"

section in Appendix 1

3. Scan **Save** barcode in Appendix 1

4. Scan **Enable Custom Prefix** barcode.

Custom Suffix

Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that

cannot exceed 10 characters. For example, if the custom suffix is "AB" and the barcode

data is "123", the Host will receive "123AB".

Disable Custom Suffix (default)

Restore All Custom Suffix

Set Custom Suffix

To set a custom prefix, scan the **Set Custom Suffix** barcode then the numeric barcodes

corresponding to the hexadecimal value of a desired prefix then the **Save** barcode.

Set custom suffix "a" (Hex value is 0x61) to all symbologies(CODE ID

value is 0x99)

1.. Scan **Set Custom Suffix** barcode.

2.. Scan numeric barcode"9""9""6""1" from the "Digital Barcodes"

section in Appendix 1

3. Scan **Save** barcode in Appendix 1

4. Scan **Enable Custom Suffix** barcode.

CODE ID

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user

programmable. Code ID can only consist of one letters.

CODE ID Selection

CODE ID Prefix： CODE ID before barcode

CODE ID Suffix： CODE ID after barcode

Restore All CODE ID

Set Custom CODE ID

Modify Codabar（CODE ID:0x61）CODE ID to be "Y"（Hex: 0x59）：

1.Scan **Set Custom CODE ID** barcode

2.Scan numeric barcode"6""1""5""9" from the "Digital Barcodes" section in Appendix 1

3.Scan **Save** barcode in Appendix 1

AIM ID

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the "AIM ID Table" section in Appendix). If AIM ID prefix is enabled, the engine will add the symbology identifier before or after the scanned data after decoding

AIM ID is not user programmable

Disable AIM ID（default）： Do Not output AIM ID.

AIM ID Prefix： AIM ID before scanned data.

AIM ID Suffix： AIM ID after scanned data.

Start Character

Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF)

can only be used to mark the end of data, which means nothing can be added after it.

Prefix/Suffix Sequence

Prefix Sequence

Suffix Sequence

Convert Case

Data Formatter

Prefix or suffix will be outputted regularly.

Data output selection

Transmit Original data (default): The barcode data will not be modified.

Transmit Start-Field: Only transmit the start-Field data and the length will be set up by

Set Length for Start Field barcode. If the set length is greater than the length of the

read character string, the original data will be transmitted. For example: if the string

"1234567890" is read and the length is set to 3, the final output data is "123".

Transmit Middle Field: Only transmit the Middle Field and the length will be set up by **Set length for Start Field** barcode and **Set Length for End Field** barcode. If the sum of the two length values is greater than the length of the read character string, the output is empty. For example: if the character string "1234567890" is read, and the start/end field lengths are set to 3 and 4 respectively, the final output data is "456".

Transmit End Filed: Only transmit the End-Field data and the length will be set up by **Set Length for End Field** barcode.. If the set length is greater than the length of the read character string, the original data will be output. For example: if the character string "1234567890" is read and the length is set to 3, the final output data is "890".

Transmit Start Field and end Field: The transmitted data is limited according to the data of **"Set Length for Start-Filed"** and **"Set Length for End-Field"**. If the sum of the two length values is greater than the length of the read character string, the original data will be transmitted. For example: if the character string "1234567890" is read, and the start/end field lengths are set to 3 and 4 respectively, the final transmitted data is "1237890"..

Set Length Range for Start/End Filed

Default value is 1, Range : 1 ~ 7900. When it is set up to be 0, this function will be invalid.

Example: Set Start Field Length as 12

1. Scan **Set Length Range for Start Field** barcode.

2. Scan numeric barcode "1""2" from the Digital Barcodes section in Appendix 1.

3. Scan **Save** barcode in Appendix 1.

Chapter 5 Symbologies

Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides

programming barcodes for configuring the engine so that it can identify various

symbologies. It is recommended to disable those that are rarely used to increase

the efficiency of the engine.

Enable/Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the engine will not be able to read any

non-programming barcodes except the programming barcodes.

Enable/Disable All 1D Symbologies

Enable/Disable All 2D Symbologies

Inverse Barcode

Only Decode Inverse Barcode (Not Enabled)

Codabar

Enable/Disable Codabar

Codabar Start/Ending Character

Set Length Range for Codabar

Any 1D barcode length can not exceed 127 characters. If minimum length is set

to be greater than maximum length, the engine only decodes Codabar

barcodes with either the minimum or maximum length. If minimum length is

same as maximum length, only Codabar barcodes with that length are to be

decoded.

Set the scanner to decode Codabar barcodes containing between 8

and 12 characters:

1. Scan the **Set the Minimum Length** barcode.

2. Scan the numeric barcode "8" from the "Digit Barcodes"

section in Appendix.

3. Scan the **Save** barcode from the "Save/Cancel Barcodes"

section in Appendix.

4. Scan the **Set the Maximum Length** barcode.

5. Scan the numeric barcodes "1" and "2" from the "Digit

Barcodes" section in Appendix.

6. Scan the **Save** barcode from the "Save/Cancel Barcodes"

section in Appendix.

QR, Micro QR	0x73	s	]Q1

Appendix3 Command Format Description

Head	DEV ID	CMD	Status	Package No.	Data Length	Data	CRC16	End
2byte	1 byte	3 byte	1 byte	2 byte	2 byte	N byte	2 byte	2 byte
0x0057								0x4150

Descript ion			
	1.For multi-byte data types, the low byte is before the high byte (little endian mode), (for example, the data length of 2 bytes is 0x0001, and the actual sending order is 01 00 instead of 00 01). The maximum length of the command is 64byte. If a command with a length greater than 64byte is sent, it will be sent in packets.		
	2.head：The Master is 0x57 0x00, and the Slave is 0x31 0x00.		
	3.DEV ID：The default value is 0x00, which is used to distinguish different devices in the 485 serial port multi-machine communication		
	CMD	[23:16]	As per MT82W Serial Commands Manual.
		[15:8]	As per MT82W Serial Commands Manual.
		[7:0]	As per MT82W Serial Commands Manual.
	CMD Status：	[7:4]	When the value is 0x0, the Command is a Programming Command.
			When the value is 0x1, the Command is a Inquiry Command.
		[3:0]	When the value is 0x0, Command is normal.
			When the value is 0x1, Command is abnormal.
	6.Package No.：Initial value is 0x00, and it will increase with the number of packets sent during		

	sub-packet transmission.
	7. Data length: the length of the data segment in the current command. If the total length of the last command is set to 64byte, the packet label needs to be increased by 1 and then a supplementary command with a data length of 0byte is used to determine that the communication has ended. . If the get status command gets 64bytes, the packet label number needs to be increased by 1 and then another get command is issued to determine whether the communication has ended.
	8.Data: The data content is determined by the corresponding instruction number. When the data length is 0byte, there is no need to fill in the content of this section.
	9.CRC16：CRC16 check is to perform CRC16 check on all data between the beginning of the packet header and before the CRC16 check. The verification is carried out in byte order starting from the packet header. Online calculation of CRC check: https://www.lammertbies.nl/comm/info/crc-calculation, check data type is Hex, parameter model select CRC-16/IBM
	10.End of packet: 0x50 0x41, used to determine the end of the command transmission.

Appendix4 ASCII Character and Keystroke Table

Char	HEX	ASCII Character	Value	Keystroke
NUL (Null char.)	0x00	Null	0x00	Ctrl+2
SOH (Start of Header)	0x01	Keypad Enter	0x58	Ctrl+A
STX (Start of Text)	0x02	Caps Lock	0x39	Ctrl+B
ETX (End of Text)	0x03	Null	0x00	Ctrl+C
EOT (End of Transmission)	0x04	Null	0x00	Ctrl+D
ENQ (Enquiry)	0x05	Null	0x00	Ctrl+E
ACK (Acknowledgment)	0x06	Null	0x00	Ctrl+F
BEL (Bell)	0x07	Enter	0x28	Ctrl+G
BS (Backspace)	0x08	Left Arrow	0x50	Ctrl+H
HT (Horizontal Tab)	0x09	Horizontal Tab	0x2b	Ctrl+I
LF (Line Feed)	0x0a	Down Arrow	0x51	Ctrl+J
VT (Vertical Tab)	0x0b	Vertical Tab	0x2b	Ctrl+K
FF (Form Feed)	0x0c	Backspace	0x2a	Ctrl+L
CR (Carriage Return)	0x0d	Enter	0x28	Ctrl+M
SO (Shift Out)	0x0e	Insert	0x49	Ctrl+N
SI (Shift In)	0x0f	Esc	0x29	Ctrl+O
DLE (Data Link Escape)	0x10	F11	0x44	Ctrl+P
DC1 (XON) (Device Control 1)	0x11	Home	0x4a	Ctrl+Q

DC2 (Device Control 2)	0x12	Print Screen	0x46	Ctrl+R
DC3 (XOFF) (Device Control 3)	0x13	Delete	0x4c	Ctrl+S
DC4 (Device Control 4)	0x14	tab+shift	0x2b,0xe1	Ctrl+T
NAK (Negative Acknowledgement)	0x15	F12	0x45	Ctrl+U
SYN (Synchronous Idle)	0x16	F1	0x3a	Ctrl+V
ETB (End of Trans. Block)	0x17	F2	0x3b	Ctrl+W
CAN (Cancel)	0x18	F3	0x3c	Ctrl+X
EM (End of Medium)	0x19	F4	0x3d	Ctrl+Y
SUB (Substitute)	0x1a	F5	0x3e	Ctrl+Z
ESC (Escape)	0x1b	F6	0x3f	Ctrl+[
FS (File Separator)	0x1c	F7	0x40	Ctrl+\
GS (Group Separator)	0x1d	F8	0x41	Ctrl+]
RS (Request to Send)	0x1e	F9	0x42	Ctrl+6
US (Unit Separator)	0x1f	F10	0x43	Ctrl+-

Appendix5 ASCII Table

(Character in yellow ground is Function Character; Character in white ground is Visible

Character)

Binary	Dec	Hex	Char
0	0	0	NUL (NULL)
1	1	1	SOH (Start Of Headling)
10	2	2	STX (Start Of Text)
11	3	3	ETX (End Of Text)
100	4	4	EOT (End Of Transmission)
101	5	5	ENQ (Enquiry)
110	6	6	ACK (Acknowledge)
111	7	7	BEL (Bell)
1000	8	8	BS (Backspace)
1001	9	9	HT (Horizontal Tab)
1010	10	0A	LF/NL(Line Feed/New Line)
